To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

Please mail this letter to Environmental Change-Makers, 6700 West 83rd, LA 90045, or photograph it with your phone and send the image to envirochangemakers@gmail.com *Please send before* **October 15, 2013** *to be included in the current batch. Thank you for your support. (Could you share this with friends, neighbors, office-mates?)*

To Members of Los Angeles City Council:

I want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

I ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

I want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

PAGE 70

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

PAGE 103

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school. And community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage produces who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plant. It would preserve 502.7 square miles (the City of LA) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generation of pure, clean, locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school. And community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage produces who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plant. It would preserve 502.7 square miles (the City of LA) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generation of pure, clean, locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Coundlman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of LA) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of LA) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds. You [redacted]st fill out [redacted]ll boxes to be valid

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of LA) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

PAGE 3 of

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of LA) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.

To Members of Los Angeles City Council:

We want to have a "GMO-free Zone" in Los Angeles. A GMO-free Zone would protect homegrown food. It would protect home, school, and community gardens, and public spaces from the contamination that genetically engineered plants and seeds spread during open pollination. A GMO-free Zone would protect locally grown food and could create an enterprise opportunity for small-scale growers and cottage producers who operate within the City of Los Angeles.

We ask you to support the motion authored by Councilman Koretz that would ban the growth, sale, and distribution of genetically engineered seeds and plants. It would preserve 502.7 square miles (the City of L.A.) where genetically engineered plants could not be grown – a huge area for saving heritage and heirloom seeds.

We want this protection to ensure future generations of pure, clean locally grown food by creating a GMO-Free Zone for the City of Los Angeles.
