10 August 2010

Council Public Works Committee
Legislative Assistant Adam Lid

RE: Council File No. 09-2645

The San Fernando Valley Historical Society is frequently asked to approve wireless telecommunications facilities in the San Fernando Valley.

We want to add our name to the other councils and groups that have sought reform of Los Angeles' wireless ordinances and demand greater protection for residential neighborhoods. We are informed that over a year has transpired since the effort for reform and more safety has been requested, with no response. This is a problem that has exponentially increased and is not going away. Why the delay?

The San Fernando Valley Historical Society is vehemently AGAINST any and all cell towers. Not only do they look ugly, cell towers are always emitting harmful radiation. The acid-based batteries are extremely flammable; in case of earthquake or other disaster, these proliferating cell towers would become sites of incendiary mini-disasters. Furthermore, some of the medical

problems that have been proven to be caused by the chronic electromagnetic-field exposure in the microwave range (or radiation emitted) by these towers include:

People severely disabled with fibromyalgia
Auto-immune diseases
Thyroiditis
Acute-nerve degeneration
Broken DNA strands in blood
Abnormal tissue death in the brain
Multi-system complaints
Lung damage
Paralysis
Muscle tremors
Bone pain
Memory loss; Dementia
Autism in children
Rare soft-tissue sarcoma
Systemic Cancer
Toxic Encephalopathy (involves brain damage to the frontal and temporal lobes)

International Journal of Occupational and Environmental Health confirms that workers exposed to high levels of RF/microwave radiation routinely have astronomical cancer rates.

Officials at the U.S. Food and Drug Administration and the National Institutes of Health and the The Federal Communications Commission (FCC), the single agency with authority to regulate the broadcast/ communications industry, have both chosen to ignore all the medical tests and scientific evidence presented. The FCC does not monitor these commercial wireless installations, and most of the appointees have practically no public health or medical expertise. The Center for Public Integrity found that FCC officials have been bribed by the industries, with such perks as expensive trips to Las Vegas---there is no accountability.

Please file this in the council file No. 09-2645.

If you have any questions, please don't hesitate to contact me.

Sincerely,

Tesa Becica
