2012 NOV -9 PM 2: 27

Dear City Officials:

CITY CLERK

As a member of the Los Angeles business community, I'm signing this letter to express my support for a more efficient, fair and environmentally conscious commercial waste collection system for the City of Los Angeles.

LA's current system for handling waste in commercial buildings fails to ensure adequate recycling services or fair rates for small business customers. It also fails to incentivize the kind of competition among service providers necessary to ensure that only companies with the highest environmental, safety and recycling standards are doing waste and recycling business in our city.

The Results?

- Despite high recycling rates, LA still sends 3-4 million tons of waste to landfills & incinerators annually.
- 60-70% of what we send to landfills comes from commercial & apartment buildings, yet small business owners encounter extra costs and work to secure recycling services.
- Small business owners don't have the pricing leverage that big companies do and they're subsidizing lower rates for their big counterparts.
- Small business corridors are often subject to multiple hauling trucks servicing overlapping routes, creating unnecessary emissions, congestion and street damage.

The City of Los Angeles should do all it can to support the bottom line of small businesses. I support the efforts of the Don't Waste LA Coalition toward a waste system for LA's small business community that makes it easier to recycle, limits unnecessary traffic and congestion and ensures that small businesses aren't paying for big companies' lower rates.

Dear City Officials:

As a member of the Los Angeles business community I'm signing this letter to express my support for a more efficient, fair and environmentally conscious commercial waste collection system for the City of Los Angeles.

LA's current system for handling waste in commercial buildings fails to ensure adequate recycling services or fair rates for small business customers. It also fails to incentivize the kind of competition among service providers necessary to ensure that only companies with the highest environmental, safety and recycling standards are doing waste and recycling business in our city.

The Results?

- Despite high recycling rates, LA still sends 3-4 million tons of waste to landfills & incinerators annually.
- 60-70% of what we send to landfills comes from commercial & apartment buildings, yet small business owners encounter extra costs and work to secure recycling services.
- Small business owners don't have the pricing leverage that big companies do and they're subsidizing lower rates for their big counterparts.
- Small business corridors are often subject to multiple hauling trucks servicing overlapping routes, creating unnecessary emissions, congestion and street damage.

The City of Los Angeles should do all it can to support the bottom line of small businesses. I support the efforts of the Don't Waste LA Coalition toward a waste system for LA's small business community that makes it easier to recycle, limits unnecessary traffic and congestion and ensures that small businesses aren't paying for big companies' lower rates.

Dear City Officials:

As a member of the Los Angeles business community I'm signing this letter to express my support for a more efficient, fair and environmentally conscious commercial waste collection system for the City of Los Angeles.

LA's current system for handling waste in commercial buildings fails to ensure adequate recycling services or fair rates for small business customers. It also fails to incentivize the kind of competition among service providers necessary to ensure that only companies with the highest environmental, safety and recycling standards are doing waste and recycling business in our city.

The Results?

- Despite high recycling rates, LA still sends 3-4 million tons of waste to landfills & incinerators annually.
- 60-70% of what we send to landfills comes from commercial & apartment buildings, yet small business owners encounter extra costs and work to secure recycling services.
- Small business owners don't have the pricing leverage that big companies do and they're subsidizing lower rates for their big counterparts.
- Small business corridors are often subject to multiple hauling trucks servicing overlapping routes, creating unnecessary emissions, congestion and street damage.

The City of Los Angeles should do all it can to support the bottom line of small businesses. I support the efforts of the Don't Waste LA Coalition toward a waste system for LA's small business community that makes it easier to recycle, limits unnecessary traffic and congestion and ensures that small businesses aren't paying for big companies' lower rates.

- Despite high recycling rates, LA still sends 3-4 million tons of waste to landfills & incinerators annually.
- 60-70% of what we send to landfills comes from commercial & apartment buildings, yet small business owners encounter extra costs and work to secure recycling services.
- Small business owners don't have the pricing leverage that big companies do and they're subsidizing lower rates for their big counterparts.
- Small business corridors are often subject to multiple hauling trucks servicing overlapping routes, creating unnecessary emissions, congestion and street damage.

The City of Los Angeles should do all it can to support the bottom line of small businesses. I support the efforts of the Don't Waste LA Coalition toward a waste system for LA's small business community that makes it easier to recycle, limits unnecessary traffic and congestion and ensures that small businesses aren't paying for big companies' lower rates.

Dear City Officials:

As a member of the Los Angeles business community I'm signing this letter to express my support for a more efficient, fair and environmentally conscious commercial waste collection system for the City of Los Angeles.

LA's current system for handling waste in commercial buildings fails to ensure adequate recycling services or fair rates for small business customers. It also fails to incentivize the kind of competition among service providers necessary to ensure that only companies with the highest environmental, safety and recycling standards are doing waste and recycling business in our city.

The Results?

- Despite high recycling rates, LA still sends 3-4 million tons of waste to landfills & incinerators annually.
- 60-70% of what we send to landfills comes from commercial & apartment buildings, yet small business owners encounter extra costs and work to secure recycling services.
- Small business owners don't have the pricing leverage that big companies do and they're subsidizing lower rates for their big counterparts.
- Small business corridors are often subject to multiple hauling trucks servicing overlapping routes, creating unnecessary emissions, congestion and street damage.

The City of Los Angeles should do all it can to support the bottom line of small businesses. I support the efforts of the Don't Waste LA Coalition toward a waste system for LA's small business community that makes it easier to recycle, limits unnecessary traffic and congestion and ensures that small businesses aren't paying for big companies' lower rates.

Dear City Officials:

As a member of the Los Angeles business community I'm signing this letter to express my support for a more efficient, fair and environmentally conscious commercial waste collection system for the City of Los Angeles.

LA's current system for handling waste in commercial buildings fails to ensure adequate recycling services or fair rates for small business customers. It also fails to incentivize the kind of competition among service providers necessary to ensure that only companies with the highest environmental, safety and recycling standards are doing waste and recycling business in our city.

The Results?

- o Despite high recycling rates, LA still sends 3-4 million tons of waste to landfills & incinerators annually.
- o 60-70% of what we send to landfills comes from commercial & apartment buildings, yet small business owners encounter extra costs and work to secure recycling services.
- o Small business owners don't have the pricing leverage that big companies do and they're subsidizing lower rates for their big counterparts.
- o Small business corridors are often subject to multiple hauling trucks servicing overlapping routes, creating unnecessary emissions, congestion and street damage.

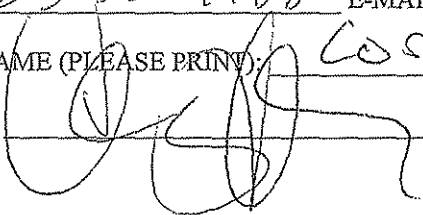

The City of Los Angeles should do all it can to support the bottom line of small businesses. I support the efforts of the Don't Waste LA Coalition toward a waste system for LA's small business community that makes it easier to recycle, limits unnecessary traffic and congestion and ensures that small businesses aren't paying for big companies' lower rates.

Dear City Officials:

As a member of the Los Angeles business community I'm signing this letter to express my support for a more efficient, fair and environmentally conscious commercial waste collection system for the City of Los Angeles.

LA's current system for handling waste in commercial buildings fails to ensure adequate recycling services or fair rates for small business customers. It also fails to incentivize the kind of competition among service providers necessary to ensure that only companies with the highest environmental, safety and recycling standards are doing waste and recycling business in our city.

The Results?

- Despite high recycling rates, LA still sends 3-4 million tons of waste to landfills & incinerators annually.
- 60-70% of what we send to landfills comes from commercial & apartment buildings, yet small business owners encounter extra costs and work to secure recycling services.
- Small business owners don't have the pricing leverage that big companies do and they're subsidizing lower rates for their big counterparts.
- Small business corridors are often subject to multiple hauling trucks servicing overlapping routes, creating unnecessary emissions, congestion and street damage.

The City of Los Angeles should do all it can to support the bottom line of small businesses. I support the efforts of the Don't Waste LA Coalition toward a waste system for LA's small business community that makes it easier to recycle, limits unnecessary traffic and congestion and ensures that small businesses aren't paying for big companies' lower rates.

Dear City Officials:

As a member of the Los Angeles business community I'm signing this letter to express my support for a more efficient, fair and environmentally conscious commercial waste collection system for the City of Los Angeles.

LA's current system for handling waste in commercial buildings fails to ensure adequate recycling services or fair rates for small business customers. It also fails to incentivize the kind of competition among service providers necessary to ensure that only companies with the highest environmental, safety and recycling standards are doing waste and recycling business in our city.

The Results?

- Despite high recycling rates, LA still sends 3-4 million tons of waste to landfills & incinerators annually.
- 60-70% of what we send to landfills comes from commercial & apartment buildings, yet small business owners encounter extra costs and work to secure recycling services.
- Small business owners don't have the pricing leverage that big companies do and they're subsidizing lower rates for their big counterparts.
- Small business corridors are often subject to multiple hauling trucks servicing overlapping routes, creating unnecessary emissions, congestion and street damage.

The City of Los Angeles should do all it can to support the bottom line of small businesses. I support the efforts of the Don't Waste LA Coalition toward a waste system for LA's small business community that makes it easier to recycle, limits unnecessary traffic and congestion and ensures that small businesses aren't paying for big companies' lower rates.
