

BRUCE CAMPBELL'S COMMENT (since I was unable to speak on ITEM #9)

Item #9 would essentially prohibit fracking "until Safety & Reliability of L.A. water supplies are assured."

In consideration of L.A. water supplies must consider:

various groundwater sources within the City of L.A.

impact of fracking on groundwater & surface water in Kern County

impact of fracking ⁱⁿ the Rocky Mtns. impacting Colorado River water

I will contact you next time regarding the Newport / Inglewood Fault.

Sincerely,

Bruce Campbell

Bruce Campbell

Los Angeles, CA 90034

ESPERANZA COMMUNITY HOUSING CORPORATION

Petition to demand the closure of the Allenco Oil facility in South Los Angeles

ESPERANZA COMMUNITY HOUSING CORPORATION

Petición para exigir el cierre de la instalación Allenco en el sur de Los Angeles

Since 2009, Allenco Energy, Inc. has been extracting oil and natural gas in the residential community of University Park in South Los Angeles. Residents, students, and workers have been affected by the toxic emissions of Allenco's operations, experiencing an array of debilitating health symptoms and foul odors. Residents have made more than 340 complaints to the South Coast Air Quality Management District (AQMD), but little has been done by AQMD to secure a safe and healthy environment for the community.

Sign the petition to demand the closure of the Allenco facility located on 814 W 23rd Street Los Angeles, CA 90007 and end oil and gas extraction in our community permanently.

Desde el 2009, Allenco Energy, Inc. ha estado extrayendo petróleo y gas natural en la comunidad residencial de University Park en el sur de Los Angeles. Los residentes, estudiantes y trabajadores se han visto afectados por las emisiones tóxicas de las operaciones de Allenco, sosteniendo una serie de síntomas debilitantes de salud y experimentado malos olores. Los residentes han realizado más de 340 quejas al Distrito de la Calidad del Aire de la Costa Sur (AQMD), pero poco se ha hecho por el AQMD para asegurar un ambiente seguro y saludable para la comunidad.

Firma la petición para exigir el cierre de la instalación Allenco localizada en el 814 W 23rd Street Los Angeles, CA 90007 y terminar la extracción de petróleo y gas en nuestra comunidad de forma permanente.

Petición para exigir el cierre de la instalación Allenco en el sur de Los Angeles

Since 2009, Allenco Energy, Inc. has been extracting oil and natural gas in the residential community of University Park in South Los Angeles. Residents, students, and workers have been affected by the toxic emissions of Allenco's operations, experiencing an array of debilitating health symptoms and foul odors. Residents have made more than 340 complaints to the South Coast Air Quality Management District (AQMD), but little has been done by AQMD to secure a safe and healthy environment for the community.

Sign the petition to demand the closure of the Allenco facility located on 814 W 23rd Street Los Angeles, CA 90007 and end oil and gas extraction in our community permanently.

Desde el 2009, Allenco Energy, Inc. ha estado extrayendo petróleo y gas natural en la comunidad residencial de University Park en el sur de Los Angeles. Los residentes, estudiantes y trabajadores se han visto afectados por las emisiones tóxicas de las operaciones de Allenco, sosteniendo una serie de síntomas debilitantes de salud y experimentado malos olores. Los residentes han realizado más de 340 quejas al Distrito de la Calidad del Aire de la Costa Sur (AQMD), pero poco se ha hecho por el AQMD para asegurar un ambiente seguro y saludable para la comunidad.

Firma la petición para exigir el cierre de la instalación Allenco localizada en el 814 W 23rd Street Los Angeles, CA 90007 y terminar la extracción de petróleo y gas en nuestra comunidad de forma permanente.

Petition to demand the closure of the Allenco Oil facility in South Los Angeles

Petición para exigir el cierre de la instalación Allenco en el sur de Los Angeles

We, the residents of South Los Angeles; Petition Allenco Oil Company, The Archdioceses of Los Angeles and South Coast Air Quality Management District (SCAQMD) To permanent shut down oil and gas production from Allenco.

Since 2009, Allenco Energy, Inc. has been extracting oil and natural gas in the residential community of University Park in South Los Angeles. Residents, students, and workers have been affected by the toxic emissions of Allenco's operations, experiencing an array of debilitating health symptoms and foul odors. Residents have made more than 340 complaints to the South Coast Air Quality Management District (AQMD), but little has been done by AQMD to secure a safe and healthy environment for the community.

Sign the petition to demand the closure of the Allenco facility located on 814 W 23rd Street Los Angeles, CA 90007 and end oil and gas extraction in our community permanently.

Nosotros los residentes del Sur Los Angeles; pedimos a Allenco Oil Company, La Arquidiócesis de Los Angeles y al Distrito de mantenimiento del control del Aire en la costa sur. (SCAQMD) el cierre permanente a la extracción de petróleo y gas producido por Allenco.

Desde el 2009, Allenco Energy, Inc. ha estado extrayendo petróleo y gas natural en la comunidad residencial de University Park en el sur de Los Angeles. Los residentes, estudiantes y trabajadores se han visto afectados por las emisiones tóxicas de las operaciones de Allenco, sosteniendo una serie de síntomas debilitantes de salud y experimentado malos olores. Los residentes han realizado más de 340 quejas al Distrito de la Calidad del Aire de la Costa Sur (SCAQMD), pero poco se ha hecho por el SCAQMD para asegurar un ambiente seguro y saludable para la comunidad.

Firma la petición para exigir el cierre de la instalación Allenco localizada en el 814 W 23rd Street Los Angeles, CA 90007 y terminar la extracción de petróleo y gas en nuestra comunidad de forma permanente.

PETITION STATEMENT

California is already earthquake prone. Fracking will exacerbate the risks of earthquakes as huge hydraulic drills will core deep into the earth, moving already loose

tectonic plates. Please! It is common sense. Additionally, poisonous gases will permanently pollute many precious aquifers, irreversibly poisoning our drinking water. Please follow the sane example of Vermont, and Ban Fracking in California. Protect our land, and Waters, Wetlands, Ecosystems, and Oceans. Please Help to Protect ourselves. Please use common sense. Please Ban Fracking in California. Protect our water! We are each at least 90% Water!

There are currently 37,178 signatures. NEW goal - We need 40,000 signatures!

PETITION BACKGROUND

Jerry Brown, Please Ban Fracking in California. There is no safe way to Frack. Show your people you respect them, and therefore their land, air, and water. Please protect California Clean Water Resources. Ban Fracking in California! There are lucrative Clean Energy Alternatives! This video spells out why Fracking is not safe, and why other states like NY are on the same page (Copy and paste in your browser) :

WHO WANTS TO BE A SHALEIIONAIRE?

Hidden Concerns of Fracking

Uninsurable Properties,
Mortgage Denials and
Real Estate Devaluation
Join the Fracking
Controversy

By Laurie Graf, CPM

The growing controversy over the potential consequences of fracking has widened from purely health and environmental concerns to that of real estate devaluation and possible total losses.

ers of properties with drilling leases might violate the National Environmental Policy Act (NEPA), which requires environmental reviews for federal funding.

Lenders Jump On the Fracking Train

During the last year, some banks such as Bank of America, Wells Fargo, Provident Funding and Fidelity have started revisiting their lending policies to account for the potential impact of drilling on property values. Homes with gas leases do not meet secondary mortgage market guidelines.

"In some cases conditions exist, such as gas wells that can significantly degrade a property's value," said a representative from Quicken Loans in a statement to the press. "In these cases, we are unable to extend financing due to the unknown future marketability of the property."

Once lenders connect the "no hazardous activity" clause in the mortgage with the rise in uninsurable events from residential fracking, the no-lending policy can be expected to expand. If homeowners with gas leases can't mortgage their property, it's unlikely they can sell their property. The inability to sell one's home may represent the most pervasive adverse impact of residential fracking.

Brian and Amy Smith, who live near the Marcellus Shale well in Dillsboro, Pa., are the first example of having banks and lenders deny loans because of proximity to a drilling site.

"If I can't refinance, could somebody get a loan to purchase my house? That's definitely a worry," said Brian Smith. Two other national lenders also turned down the Smiths' application.

In March 2012, the Department of Agriculture started an extensive environmental review to make fracking risk conclusions before continuing to issue billions of dollars in federal mortgages to people who have leased their land for oil and gas drilling.

Reallocating the Risk

National insurance companies are also starting to follow suit in denying or cancelling coverage on those properties with fracking activity.

In July 2012, Nationwide Insurance issued a release stating that the company's personal and commercial lines insurance policies were not designed to provide coverage for any fracking-related risks.

"From an underwriting standpoint, we do not have a comfort level with the unique risks associated with the fracking process to provide coverage at a reasonable price," said the company.

The dangerous risk assessment and environmental hazards now associated with fracking can result in injury or loss of life, severe damage or destruction of property and clean-up responsibilities, all in a homeowner's back yard. This may pose uninsurable conditions with exponential unknown risk that cannot be controlled.

Without a doubt, Nationwide's position on the risks will be closely watched by other insurance carriers. At a time when many insurers are facing increased payouts due to weather-related damage, it will be interesting to watch how the industry evolves on the mitigation of fracking risks.

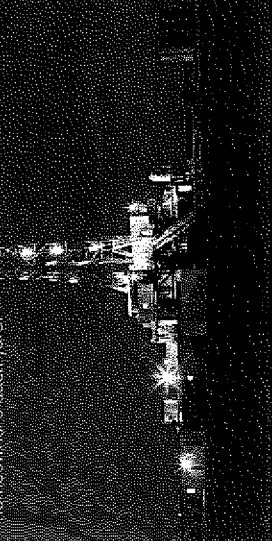

Shale Gas, Natural Wonder or Manmade Disaster?

Currently, the Halliburton Loophole does not require oil and gas companies to disclose when, where or what chemicals they use in their fracking process. Fracking is also exempt from the Safe Drinking Water Act, Clean Water Act and the Clean Air Act, despite being linked to thousands of cases of water contamination. The exemption from the Safe Drinking Water and Clean Water acts is notable, considering how the process of combining toxic chemicals with water to break rock formations turns drinking water into toxic, sometimes radioactive waste.

According to the EPA, fracking wells emit volatile organic compounds including benzene and hexane. These compounds contribute to smog formation and may also cause cancer and other serious health effects. A recent University of Colorado study found that the air quality for communities and people living near fracking operations is five times higher than the Federal Hazard Standard. Communities surrounding those sites have a higher risk of acute and chronic health conditions.

Lastly, wastewater from fracking promotes earthquakes. The U.S. Geological Survey has documented a tripling of earthquakes with a magnitude of greater than 3.0 in the Midwest caused by wastewater wells originating from fracking operations. The Midwest is not known for their earthquakes, unlike California, where fracking is rampant across the state. California is notably home to the Inglewood Oil Field in Los Angeles, the

The dangerous risk assessment and environmental hazards now associated with fracking can result in injury or loss of life, severe damage or destruction of property and clean-up responsibilities, all in a homeowner's back yard.

largest urban oil field in the country with a surrounding population of 300,000 residents, and it resides on two major fault lines.

Is There a Safe Answer?

American culture traditionally favors land use that keeps heavy industrial activity out of residential neighborhoods. The reasons range from safety to aesthetics. A home represents a family's most valuable asset, financially and otherwise.

The energy and housing sectors both rely on investor dollars to fund their future. Will individuals' retirement funds expand as their homeownership rights fade away? Can the secondary mortgage market, which measures economic recovery by construction starts and new mortgage loans, now ignore the inherent risk associated with fracking?

The environmental and public health consequences of fracking are sufficient alone to question the true value of pursuing this domestic energy source, let alone the signaling that more lenders and insurance companies are retreating from these risky properties.

Considering the fact that the technology does not currently provide "safe" fracking, the consideration, research and investment in clean and sustainable domestic energy sources such as wind and solar must be advanced. ■

RE: Agenda Item #9
CF 13-1152-S1

DATE: February 25, 2014

My name is Luetta {Lu} Watson. I am a stakeholder of the Harbor Gateway North Neighborhood Council (HGNNC). I reside in the community of Athens on the Hill which is District 5 of HGNNC. {See boundary map, attached.}

The Harbor Gateway North area is filled throughout with **active/inactive/abandoned** oil wells, as is clearly shown on the two attached color copies of the State of California Department of Conservation "DOGGR" maps (Districts 4 and 5 are prime examples.)

I ask that you take particular notice of the upper (highlighted) portion of the **green** sheet which is District 5 where I reside. District 5 sits atop a methane gas field. We sustained a methane gas explosion in Athens on the Hill in February, 2002, which required evacuation of residents; Hazmat response; etc. {The explosion was reported on in a *L. A. Times* article by reporter, Kenneth Reich on February 15, 2002}.

In August, 2013, the Harbor Gateway North area was subjected to what is known as the Rosecrans 3D Imaging Project. Since that event, untold numbers of stakeholders/residents, especially those residing in Districts 4 and 5, are/have complained of cracks in ceilings; cracks in walls, cracks in sidewalks; shifting of houses; oil seeping into bathtubs, "new" health issues, etc.

Page 2

I respectfully request that in the best interest of all citizens of the City of Los Angeles and especially those who are presently experiencing well-stimulation and/or its effect on their communities, that the Recommendation of this Committee to the City Council for this Motion (Koretz/Bonin) is **"APPROVE."**

Thank you,

Luetta {Lu Watson}, Stakeholder

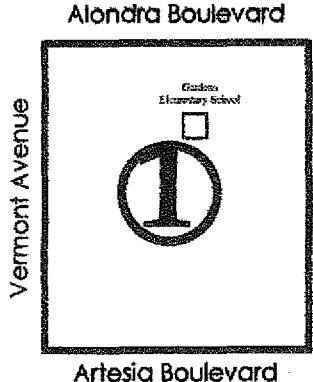

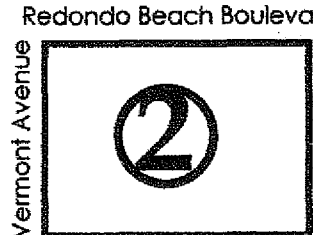

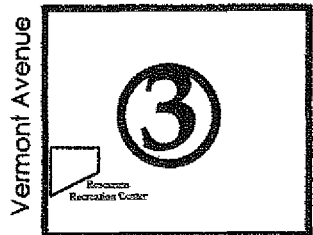

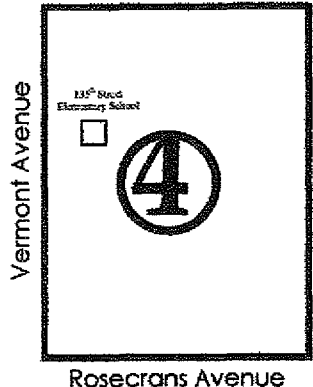

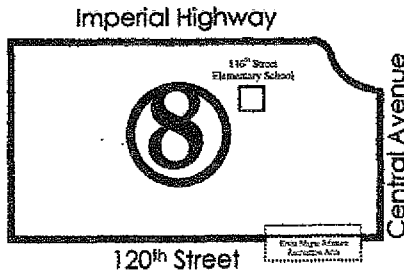

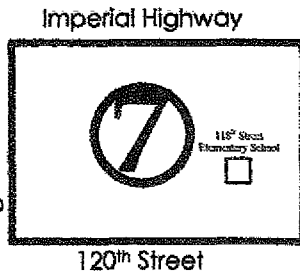

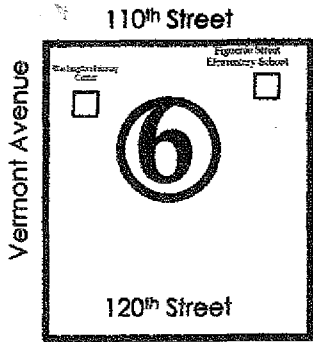

Harbor Gateway North N/C

and

Secretary, Athens on the

Hill Community Association

District 3
AND
District 4

LA City Fracking hearing;

1. Instead of passing a moratorium on fracking, you should pass an outright permanent ban. There is no way the industry is going to be able to prove that fracking is safe. Don't let them get their hopes up, and there is no need to drag out this discussion for years.

LA does not need any new sources of air pollution, and the planet does not need more methane emission sources, and we don't need to put our groundwater at risk.

2. In addition to banning fracking within the City limits, you should ban all oil and gas exploration and production. This is simply incompatible with a city of 4 million.
3. In addition, you should have a campaign to cement and cap all existing and abandoned oil and gas wells. Many of these are putting out extensive Methane emissions – Methane is a potent greenhouse gas.
4. And there is an earthquake risk from fracking. It is not the fracking itself that causes the earthquakes, but the high pressure injection of waste water into injection wells. Many of these injection sites are on or near the Inglewood fault which is capable of a very large earthquake. Waste water injection wells should also be banned within the City limits.
