Re: Keeping Aliso Canyon Gas Storage Facility shut down

I am Susan Gorman-Chang, Vice President of PRNC, but today I speak to you simply as a resident. I want to thank Mitch Englander for all he has done so far for us during the Aliso Canyon well blow out. He enabled Argo Scientific to start Fenceline air monitoring which we can access in real time from our cell phones.¹ We have one more important ask, and that is for you to write letter to regulators and Gov Brown to KEEP Aliso Cyn Shut Down.

Aliso Cyn is a health issue masquerading as an energy issue. It has been shut down, meaning no gas in or out, for almost a year now, so we have proven we don't need it to meet our energy needs. Energy issue is off the table now. It is a health issue.

I am old enough to remember the fight to get lead out of gasoline. Lead was a cheap and convenient, yet lead is cumulatively toxic. Aliso Cyn is cheap and convenient, yet chemicals (methane mixed with mercaptan and chemicals left over from oil drilling including benzene, hexane, hydrogen sulfide, etc.) are cumulatively toxic. This is a report Gasping for Breath, the health effects from ozone pollution from the oil and gas industry.² This is a health issue now, not an energy issue. Aliso continues to leak even with it being shut down. This is real time Fenceline.

I know Aliso Cyn is on County land, but that did not stop you from helping us during the blowout, so why would it stop you from helping us now? Please, I implore you, join LAUSD and Senator Feinstein in calling for the **decommission of Aliso Cyn**.
