**Comments for Public Posting:** AGAINST the motion If you want the job to be done right you have to give people the proper tools. Monies could be best allocated for the following technology: LAPD currently uses a software from the 80s (Microsoft DOS). We as a city have already neglected the department for over 3 decades. They need new RMS and CAD softwares before any other IT update. A new software like MARK43 would save the department 238,000 hrs increasing productivity by 80%. Diminishing the cost of the department by a significant amount. Pasadena, Burbank, Hermosa Beach are all using Mark43. Look how much better they are able to do their job in all aspects.
