

REPORT OF THE CHIEF LEGISLATIVE ANALYST

DATE: January 14, 2016

TO: Honorable Members of the Rules, Elections, Intergovernmental Relations, and
Neighborhoods Committee

FROM: Sharon M. Tso *Sharon Tso for* Council File No.: 15-0002-S104
Chief Legislative Analyst Assignment No.: 15-11-0907

SUBJECT: Resolution (O'Farrell – Ryu) to SUPPORT H.R. 1552 and S. 621

CLA RECOMMENDATION: Adopt the attached Resolution (O'Farrell – Ryu) to include in the 2015-16 Federal Legislative Program SUPPORT for H.R. 1552 (Slaughter) and S. 621 (Feinstein) which would ensure the safety and effectiveness of medically important antimicrobials approved for use in the prevention and control of animal diseases in order to minimize the development of antibiotic-resistant bacteria.

SUMMARY

The Resolution (O'Farrell – Ryu), introduced on October 13, 2015, states that 80 percent of the antibiotics sold in the United States are used in livestock production. The Resolution indicates that low doses are routinely given to livestock in order to compensate for crowded, unsanitary conditions in a practice known as “non-therapeutic use.” The Resolution further states that antibiotic resistant bacteria have resulted from the use of nontherapeutic use of antibiotics in agriculture and are the cause of several food-borne illness outbreaks.

H.R. 1552 and S. 621 would require that antibiotics used in the treatment of human and animal diseases to demonstrate that there is a reasonable certainty of no harm to human health from the antimicrobial resistance attributable to the nontherapeutic use of the drug.

The Resolution requests that the City support H.R. 1552 and S. 621.

BACKGROUND

Antibiotics have been in use since the 1940s, and have greatly reduced illness and death caused by bacterial pathogens. However, the extensive use of these drugs during the past 70 years has spurred the development of pathogens which are difficult or impossible to kill with existing antibiotics. The World Health Organization (WHO) states that antibiotic resistance is occurring in all regions of the world and constitutes a major threat to public health. According to the WHO, in the absence of urgent action, the world may be entering a “post-antibiotic era” in which common bacterial infections can cause serious illness or death.

The Centers for Disease Control and Prevention (CDC) states that 2 million individuals within the United States become infected with antibiotic-resistant bacteria per year. Of these individuals, 23,000 people die as a result of the infection. The CDC indicates that such resistance develops through the inappropriate use of antibiotics and person-to-person spread of disease-resistant pathogens. In addition, the CDC states that there is a link between the use of antibiotics in food-producing animals and antibiotic-resistant illnesses in humans. According to the CDC, antibiotics should only be provided to food-producing animals for the treatment of infectious disease rather than the promotion of growth.

The CDC indicates that immunization, safe food preparation, handwashing, and using antibiotics as directed and as necessary will help prevent the development of antibiotic-resistant bacteria. The CDC further states that more effective disease tracking and the development of new drugs and diagnostic tests will also help prevent the development of these organisms.

On March 2, 2015, S. 621 (Feinstein) was introduced in the United States Senate. The bill, also known as the Preventing Antibiotic Resistance Act of 2015, would require the Food and Drug Administration (FDA) to reject a new animal drug application if the applicant fails to demonstrate the following: the drug is effective, the drug is targeted to animals at risk of developing a specific bacterial disease, and there is reasonable certainty of no harm to human health from microbial resistance to the drug. Antibiotics already approved for use in food-producing animals must submit documentation to the FDA verifying that the drug meets this criteria. Under S. 621, the FDA is required to withdraw approval of a drug if it determines there is insufficient evidence that the drug meets this criteria. According to the author, this bill will help to prevent the rise of antibiotic-resistant pathogens by ensuring the careful use of antibiotics in the agriculture industry. On March 23, 2015, H.R. 1552 (Slaughter) was introduced in the United States House of Representatives and contains similar provisions as S. 621.

The Emergency Management Department states that these bills, if enacted, would not affect City operations. However, both bills are consistent with existing City policies and practices which ensure the health and safety of City residents. Therefore, we recommend that the City support S. 621 and H.R. 1552.

RESOLUTION

WHEREAS, any official position of the City of Los Angeles with respect to legislation, rules, regulations or policies proposed to or pending before a local, state or federal governmental body or agency must have first been adopted in the form of a Resolution by the City Council with the concurrence of the Mayor; and

WHEREAS, eighty percent of the antibiotics sold in the United States are used in livestock production with the Centers for Disease Control and Prevention reporting that most of those antibiotics are used irresponsibly; and

WHEREAS, low doses of antibiotics are routinely fed to livestock for growth promotion and disease prevention to compensate for crowded, unsanitary conditions, in a practice known as "nontherapeutic use"; and

WHEREAS, "nontherapeutic use" creates ideal conditions for the development of antibiotic resistant bacteria; and

WHEREAS, antibiotic resistant bacteria on livestock operations are known to spread to retail meat, farmers, farm workers and rural environments; and

WHEREAS, antibiotic resistance in pathogens as the result of the "nontherapeutic use" of antibiotics in livestock production has been a public health concern since the 1960s; and

WHEREAS, antibiotic resistant bacteria are the cause of several food borne illness outbreaks, including a 2011 outbreak of antibiotic resistant *Salmonella* in ground turkey which sickened 136 people, hospitalized 37, and killed one which led to the third largest meat recall in the USDA's records and a 2013 outbreak of antibiotic resistant *Salmonella* in chicken that sickened 416 people and hospitalized 162; and

WHEREAS, the Centers for Disease Control and Prevention reported that at least two million Americans suffer from antibiotic resistant bacterial infections each year and twenty-three thousand Americans die from those infections; and

WHEREAS, the medical and social costs of antibiotic-resistant infections in just one hospital, for one year, have been estimated to be between \$13 million and \$18 million; and

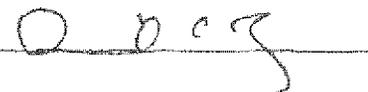

WHEREAS, Representative Louise Slaughter has introduced H.R. 1552, the Preservation of Antibiotics for Medical Treatment Act (PAMTA), to amend the Federal Food, Drug, and Cosmetic Act, to preserve the effectiveness of medically important antimicrobials used in the treatment of human and animal diseases by requiring approval for use of an animal drug, which is a medically important antimicrobial, to demonstrate that there is reasonable certainty of no harm to human health from antimicrobial resistance attributable to the nontherapeutic use of the drug; and

WHEREAS, Senator Diane Feinstein has introduced S. 621, the Prevention of Antibiotic Resistance Act (PARA), to amend the Federal Food, Drug, and Cosmetic Act to ensure the safety and effectiveness of medically important antimicrobials approved for use in the prevention and control of animal diseases, in order to minimize the development of antibiotic-resistant bacteria. The bill instructs the Federal Drug and Food Administration to start the process of examining drug approvals, and defines a veterinarian client-patient relationship;

NOW, THEREFORE, BE IT RESOLVED, with the concurrence of the Mayor, that by the adoption of this Resolution, the City of Los Angeles includes in its 2015-2016 Federal Legislative Program **SUPPORT** of H.R. 1552, the Protection of Antibiotics for Medical Treatment Act (PAMTA), and S. 621, the Prevention of Antibiotic Resistance Act (PARA), which would preserve the effectiveness of medically important antimicrobials used in the treatment of human and animal diseases and to ensure the safety and effectiveness of medically important antimicrobials approved for use in the prevention and control of animal diseases, in order to minimize the development of antibiotic-resistant bacteria.

114TH CONGRESS
1ST SESSION

S. 621

To amend the Federal Food, Drug, and Cosmetic Act to ensure the safety and effectiveness of medically important antimicrobials approved for use in the prevention and control of animal diseases, in order to minimize the development of antibiotic-resistant bacteria.

IN THE SENATE OF THE UNITED STATES

MARCH 2, 2015

Mrs. FEINSTEIN (for herself, Ms. COLLINS, Mrs. GILLIBRAND, and Ms. WARREN) introduced the following bill; which was read twice and referred to the Committee on Health, Education, Labor, and Pensions

A BILL

To amend the Federal Food, Drug, and Cosmetic Act to ensure the safety and effectiveness of medically important antimicrobials approved for use in the prevention and control of animal diseases, in order to minimize the development of antibiotic-resistant bacteria.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Preventing Antibiotic
5 Resistance Act of 2015”.

1 **SEC. 2. PURPOSE.**

2 The purpose of this Act is to ensure the safety and
3 effectiveness of medically important antimicrobials ap-
4 proved for use in the prevention and control of animal dis-
5 eases, in order to minimize the development of antibiotic-
6 resistant bacteria.

7 **SEC. 3. EVIDENCE OF SAFETY OF MEDICALLY IMPORTANT**
8 **VETERINARY ANTIMICROBIALS.**

9 (a) APPLICATIONS PENDING OR SUBMITTED AFTER
10 ENACTMENT.—Section 512(d)(1) of the Federal Food,
11 Drug, and Cosmetic Act (21 U.S.C. 360b(d)(1)) is amend-
12 ed—

13 (1) in the first sentence—

14 (A) in subparagraph (H), by striking “or”
15 at the end;

16 (B) in subparagraph (I), by inserting “or”
17 at the end; and

18 (C) by inserting after subparagraph (I) the
19 following:

20 “(J) with respect to a medically important
21 antimicrobial (as defined in subsection (q)), the
22 applicant has failed to demonstrate that a New
23 Animal Drug Application for an antimicrobial
24 labeled for disease prevention or control fails to
25 meet the criteria in subsection (q)(2)(A);” and

1 (2) in the second sentence, by striking “(A)
2 through (I)” and inserting “(A) through (J)”.

3 (b) ENSURING JUDICIOUS USE IN ANIMALS OF
4 MEDICALLY IMPORTANT ANTIMICROBIALS.—Section 512
5 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C.
6 360b) is amended by adding at the end the following:

7 “(q) ENSURING JUDICIOUS USE IN ANIMALS OF
8 MEDICALLY IMPORTANT ANTIMICROBIALS.—

9 “(1) APPLICABILITY.—This subsection applies
10 to medically important antimicrobials approved for
11 use in a food-producing animal—

12 “(A)(i) for which there is in effect an ap-
13 proval of an application or an exemption under
14 subsection (b), (i), or (j) of section 505; or

15 “(ii) that is otherwise marketed for human
16 use;

17 “(B) for which the Food and Drug Admin-
18 istration has initiated or completed withdrawal
19 or modification of an approved label for growth
20 promotion, feed efficiency, or other production
21 use or over-the-counter use, in accordance with
22 the Guidance for Industry entitled, ‘New Ani-
23 mal Drugs and New Animal Drug Combination
24 Products, Administered in or on Medicated
25 Feed or Drinking Water of Food-Producing

1 Animals: Recommendations for Drug Sponsors
 2 for Voluntarily Aligning Product Use Condi-
 3 tions with GFI #209', published in December
 4 2013; and

5 “(C) for which the Food and Drug Admin-
 6 istration has approved a label—

7 “(i) for disease control or prevention
 8 at the same or similar dosage level as ap-
 9 plicable for the approved production use
 10 described in subparagraph (B);

11 “(ii) that does not specify an explicitly
 12 defined duration of therapy; or

13 “(iii) specifying a dosage that is not
 14 expected to treat a specific bacterial patho-
 15 gen.

16 “(2) REVIEW OF DISEASE PREVENTION AND
 17 CONTROL APPROVALS.—

18 “(A) IN GENERAL.—Not later than Janu-
 19 ary 1, 2017, the Secretary shall initiate a proc-
 20 ess whereby—

21 “(i) not later than January 1, 2018,
 22 a sponsor of an antimicrobial drug de-
 23 scribed in paragraph (1) shall submit to
 24 the Secretary evidence demonstrating that,
 25 with respect to such drug—

1 “(I) there is evidence of effective-
2 ness in controlling or preventing bac-
3 terial disease;

4 “(II) an approved use is con-
5 sistent with accepted veterinary prac-
6 tice;

7 “(III) an approved use is linked
8 to a specific etiologic agent;

9 “(IV) an approved use is appro-
10 priately targeted to animals at risk of
11 developing a specific bacterial disease;

12 “(V) an approved use has an ex-
13 plicitly defined duration of therapy;
14 and

15 “(VI) there is reasonable cer-
16 tainty of no harm to human health
17 due to the development of anti-
18 microbial resistance; and

19 “(ii)(I) if the Secretary determines
20 that the evidence submitted under clause
21 (i) is sufficient to demonstrate that the
22 drug meets the requirements described in
23 subclauses (I) through (VI) of such clause,
24 not later than December 31, 2018, the
25 Secretary shall issue a revised label ap-

1 proval for the antimicrobial drug, as nec-
2 essary; or

3 “(II) if the Secretary determines that
4 the evidence submitted under clause (i) is
5 insufficient to demonstrate that the drug
6 meets the requirements described in sub-
7 clauses (I) through (VI) of such clause, not
8 later than December 31, 2018, the Sec-
9 retary shall withdraw approval of any indi-
10 cation claims described in paragraph
11 (1)(C) for which the Secretary determines
12 the evidence is insufficient and, as nec-
13 essary, issue a revised label approval.

14 “(B) WITHDRAWAL OF CLAIMS.—On or
15 before January 1, 2018, the sponsor of a drug
16 described in paragraph (1) may request the ap-
17 proval of the Secretary to remove any label
18 claim described in paragraph (1)(C), and the
19 Secretary shall approve any such request and,
20 as necessary, issue a revised label. The sponsor
21 shall not be required to submit the evidence re-
22 quired under subparagraph (A)(i) with respect
23 to any claim so withdrawn.

24 “(3) EXEMPTIONS.—In the case of a drug that
25 is a medically important antimicrobial for which the

1 Secretary grants an exemption under section 505(i),
2 the withdrawal of indication claims in a food-pro-
3 ducing animal in accordance with paragraph (2)(B)
4 shall be effective on the date that is 2 years after
5 the date on which the Secretary grants the exemp-
6 tion, unless, not later than 2 years after the date on
7 which the Secretary grants the exemption, the Sec-
8 retary provides a written determination of intent to
9 extend the exemption.

10 “(4) DEFINITION.—In this subsection, the term
11 ‘medically important antimicrobial’ means a drug
12 that—

13 “(A) is intended for use in food-producing
14 animals; and

15 “(B) is composed wholly or partly of—

16 “(i) any kind of penicillin, tetracy-
17 cline, macrolide, lincosamide, streptogram-
18 in, aminoglycoside, sulfonamide, cephalo-
19 sporin, or fluoroquinolone; or

20 “(ii) a drug from an antimicrobial
21 class that is listed as ‘highly important’,
22 ‘critically important’, or ‘important’ by the
23 World Health Organization in the latest
24 edition of its publication entitled ‘Critically

1 Important Antimicrobials for Human Med-
 2 icine' (or a successor publication).”.

3 **SEC. 4. SENSE OF THE SENATE REGARDING VETERINARY**
 4 **OVERSIGHT OF USE OF MEDICALLY IMPOR-**
 5 **TANT ANTIMICROBIALS.**

6 (a) IN GENERAL.—It is the sense of the Senate that
 7 a valid veterinarian-client-patient relationship should exist
 8 to ensure that medically important antimicrobials are used
 9 in food-producing animals in a manner that is consistent
 10 with professionally accepted best practices.

11 (b) VETERINARIAN-CLIENT-PATIENT RELATION-
 12 SHIP.—In this section, the term “veterinarian-client-pa-
 13 tient relationship” means a relationship in which all of the
 14 following criteria are met:

15 (1) The veterinarian has assumed the responsi-
 16 bility for making medical judgments regarding the
 17 health of the patient and the client has agreed to
 18 follow the veterinarian’s instructions.

19 (2) The veterinarian has sufficient knowledge of
 20 the patient to initiate at least a general or prelimi-
 21 nary diagnosis of the medical condition of the pa-
 22 tient. This means that the veterinarian is personally
 23 acquainted with the keeping and care of the patient
 24 by virtue of—

1 (A) a timely examination of the patient by
2 the veterinarian; or

3 (B) medically appropriate and timely visits
4 by the veterinarian to the premises where the
5 animal or animals are kept.

6 (3) The veterinarian is readily available for fol-
7 low-up evaluation or has arranged for veterinary
8 emergency coverage and continuing care and treat-
9 ment.

10 (4) The veterinarian provides oversight of treat-
11 ment, compliance, and outcome.

12 (5) Patient records are maintained.

○

114TH CONGRESS
1ST SESSION

H. R. 1552

To amend the Federal Food, Drug, and Cosmetic Act to preserve the effectiveness of medically important antimicrobials used in the treatment of human and animal diseases.

IN THE HOUSE OF REPRESENTATIVES

MARCH 23, 2015

Ms. SLAUGHTER (for herself, Mr. BLUMENAUER, Mr. CARTWRIGHT, Ms. CLARKE of New York, Mr. CONNOLLY, Ms. DELAURO, Mr. DEUTCH, Ms. EDWARDS, Ms. ESHOO, Mr. FARR, Mr. LEVIN, Mr. LOWENTHAL, Mrs. CAROLYN B. MALONEY of New York, Ms. MOORE, Ms. PINGREE, Mr. RANGEL, Ms. SCHAKOWSKY, Mr. SCHIFF, Ms. SPEIER, Ms. TSONGAS, Mr. WELCH, and Mr. GRIJALVA) introduced the following bill; which was referred to the Committee on Energy and Commerce

A BILL

To amend the Federal Food, Drug, and Cosmetic Act to preserve the effectiveness of medically important antimicrobials used in the treatment of human and animal diseases.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Preservation of Anti-
5 biotics for Medical Treatment Act of 2015”.

1 **SEC. 2. FINDINGS.**

2 The Congress finds the following:

3 (1) All uses of antibiotics, including for food-
4 producing animals, have the potential to cause re-
5 sistance and contribute to the development of anti-
6 biotic-resistant bacterial infections in people.

7 (2) In 1977, the Food and Drug Administra-
8 tion (FDA) concluded that feeding livestock low
9 doses of antibiotics used in human disease treatment
10 could promote the development of antibiotic resist-
11 ance in bacteria. However, the Food and Drug Ad-
12 ministration did not act in response to these find-
13 ings, despite laws requiring the agency to do so.

14 (3) In 2012, the Food and Drug Administra-
15 tion Guidance for Industry #209 provided a sum-
16 mary of over 40 years of peer-reviewed scientific lit-
17 erature regarding use of antimicrobial drugs in live-
18 stock which reiterated that the use of antibiotics in
19 animals contributes to the resistance in human
20 pathogens and concludes that strategies for control-
21 ling antibiotic resistance, including limiting medi-
22 cally important antimicrobial drugs in food-pro-
23 ducing animals only to uses that are considered nec-
24 essary for assuring animal health are needed.

25 (4) The 2014 President's Council of Advisors
26 on Science and Technology Report to the President

1 on Combating Antibiotic-Resistant Bacteria also
2 concludes that substantial evidence exists that the
3 use of antibiotics in food animals promotes the de-
4 velopment and spread of antibiotic resistance in bac-
5 teria that can spread to people and that it is clear
6 that agricultural use of antibiotics can affect human
7 health.

8 (5) Recently published scientific studies have
9 shown that food-producing animals, and animal pro-
10 duction facilities, are a source of antibiotic-resistant
11 bacteria which have infected humans and present an
12 increased risk of acquiring and antibiotics resistant
13 infection.

14 (6) Antibiotic resistance is a crisis which
15 threatens public health, the economy, and national
16 security.

17 (7) In 2013, the Centers for Disease Control
18 and Prevention estimated that antibiotic-resistant
19 infections cause at least 2 million infections, 23,000
20 deaths, 8 million additional hospital days, and \$20
21 to \$35 billion in excess direct health care costs each
22 year in the United States.

23 (8) The 2014 World Health Organization re-
24 port, “Antimicrobial Resistance: Global Report on
25 Surveillance 2014”, concluded that antimicrobial re-

1 sistance is a current reality and the problem is so
2 serious that it threatens the achievements of modern
3 medicine.

4 (9) Without effective antibiotics—

5 (A) common infections could become un-
6 treatable—even fatal; and

7 (B) medical advances such as joint replace-
8 ments, Cesarean sections, organ transplants
9 and chemotherapy could become nonviable.

10 (10) Antibiotic resistance, resulting in a re-
11 duced number of effective antibiotics, may signifi-
12 cantly impair the ability of the United States to re-
13 spond to terrorist attacks involving bacterial infec-
14 tions, such as anthrax and smallpox, or to an event
15 resulting in a large influx of hospitalized patients.

16 (11) In 2011, the Food and Drug Administra-
17 tion determined that—

18 (A) 13.5 million kilograms of antibacterial
19 drugs were sold for use on food animals in the
20 United States in 2010;

21 (B) 3.3 million kilograms of antibacterial
22 drugs were used for human health in 2010; and

23 (C) therefore, 80 percent of antibacterial
24 drugs disseminated in the United States in

1 2010 were sold for use on food animals, rather
2 than being used for human health.

3 (12) The “FDA Annual Summary Report on
4 Antimicrobials Sold or Distributed in 2012 for Use
5 in Food-Producing Animals” showed that the use of
6 medically important antibiotics in food-producing
7 animals increased 16 percent from 2009 to 2012.

8 (13)(A) In 2003, the Food and Drug Adminis-
9 tration modified the drug approval process for anti-
10 biotics to recognize the development of resistant bac-
11 teria as an important aspect of safety, but most
12 antibiotics currently used in animal production sys-
13 tems for nontherapeutic purposes were approved be-
14 fore the Food and Drug Administration began con-
15 sidering resistance during the drug-approval process.

16 (B) The Food and Drug Administration has not
17 established a schedule for reviewing those existing
18 approvals.

19 (14) A stated goal of FDA Guidance documents
20 209 and 213 is a reduction in the overall consump-
21 tion of antibiotics. The FDA policy continues to
22 allow the use of antibiotics for routine disease pre-
23 vention without requiring evidence of the presence of
24 a specific disease or requiring the mitigation of con-
25 ditions which elevate disease risk.

1 (15) There is inadequate distinction between
2 usage for disease prevention and production pur-
3 poses, such as growth promotion, on FDA approved
4 drug labels. A 2014 analysis of the approved animal
5 drugs affected by Guidance 213 by the Pew Chariti-
6 table Trusts found that numerous approved drug la-
7 bels contained overlapping indications for growth-
8 promotion and disease prevention.

9 (16) The European Union (EU) banned the use
10 of antibiotics for growth promotion in 2006, a full
11 decade before the FDA's voluntary approach will go
12 into effect.

13 (17) Since the EU ban, antibiotic usage has de-
14 creased without affecting livestock production.

15 (18) In 2010, the Danish Veterinary and Food
16 Administration testified that the Danish ban of the
17 nontherapeutic use of antibiotics in food-animal pro-
18 duction resulted in a marked reduction in anti-
19 microbial resistance in multiple bacterial species, in-
20 cluding *Campylobacter* and *Enterococci*.

21 (19) The experience in the Netherlands has
22 shown that during the phaseout use indications for
23 growth promotion were completely supplanted by
24 disease prevention. Total antibiotic consumption re-
25 maind constant. After the implementation of man-

1 datory reduction targets and improved surveillance
2 of usage practices antibiotic consumption declined
3 ahead of target without impacting production levels.

4 (20) In 2009, the Congressional Research Serv-
5 ice concluded that without restrictions on the use of
6 antimicrobial drugs in the production of livestock,
7 export markets for livestock and poultry could be
8 negatively impacted due to restrictions on the use of
9 antibiotics in other nations.

10 (21) The American Medical Association, the In-
11 fectionous Disease Society of America, the American
12 Public Health Association, the National Association
13 of County and City Health Officials, and the Na-
14 tional Sustainable Agriculture Coalition are among
15 the over 400 organizations representing health, con-
16 sumer, agricultural, environmental, humane, and
17 other interests that have supported enactment of
18 legislation to phaseout nontherapeutic use in farm
19 animals of medically important antimicrobials.

20 **SEC. 3. PURPOSE.**

21 The purpose of this Act is to preserve the effective-
22 ness of medically important antimicrobials used in the
23 treatment of human and animal diseases.

1 **SEC. 4. PROOF OF SAFETY OF MEDICALLY IMPORTANT**
2 **ANTIMICROBIALS.**

3 (a) APPLICATIONS PENDING OR SUBMITTED AFTER
4 ENACTMENT.—Section 512(d)(1) of the Federal Food,
5 Drug, and Cosmetic Act (21 U.S.C. 360b(d)(1)) is amend-
6 ed—

7 (1) in the first sentence—

8 (A) in subparagraph (H), by striking “or”
9 at the end;

10 (B) in subparagraph (I), by inserting “or”
11 at the end; and

12 (C) by inserting after subparagraph (I) the
13 following:

14 “(J) with respect to a medically important
15 antimicrobial (as defined in subsection (q)), the
16 applicant has failed to demonstrate that there
17 is a reasonable certainty of no harm to human
18 health due to the development of antimicrobial
19 resistance that is attributable, in whole or in
20 part, to the nontherapeutic use (as defined in
21 subsection (q)) of the medically important anti-
22 microbial or drug;” and

23 (2) in the second sentence, by striking “(A)
24 through (I)” and inserting “(A) through (J)”.

25 (b) PHASED ELIMINATION OF NONTHERAPEUTIC
26 USE IN ANIMALS OF MEDICALLY IMPORTANT

1 ANTIMICROBIALS.—Section 512 of the Federal Food,
2 Drug, and Cosmetic Act (21 U.S.C. 360b) is amended by
3 adding at the end the following:

4 “(q) PHASED ELIMINATION OF NONTHERAPEUTIC
5 USE IN ANIMALS OF MEDICALLY IMPORTANT
6 ANTIMICROBIALS.—

7 “(1) APPLICABILITY.—This paragraph applies
8 to the nontherapeutic use in a food-producing ani-
9 mal of a drug—

10 “(A) that is a medically important anti-
11 microbial; or

12 “(B)(i) for which there is in effect an ap-
13 proval of an application or an exemption under
14 subsection (b), (i), or (j) of section 505; or

15 “(ii) that is otherwise marketed for human
16 use.

17 “(2) WITHDRAWAL.—The Secretary shall with-
18 draw the approval of a nontherapeutic use in food-
19 producing animals of a drug described in paragraph
20 (1) on the date that is 2 years after the date of en-
21 actment of this subsection unless—

22 “(A) before the date that is 2 years after
23 the date of the enactment of this subsection,
24 the Secretary makes a final written determina-
25 tion that the holder of the approved application

1 has demonstrated that there is a reasonable
2 certainty of no harm to human health due to
3 the development of antimicrobial resistance that
4 is attributable in whole or in part to the non-
5 therapeutic use of the drug; or

6 “(B) before the date specified in subpara-
7 graph (A), the Secretary makes a final written
8 determination under this subsection, with re-
9 spect to a risk analysis of the drug conducted
10 by the Secretary and other relevant informa-
11 tion, that there is a reasonable certainty of no
12 harm to human health due to the development
13 of antimicrobial resistance that is attributable
14 in whole or in part to the nontherapeutic use of
15 the drug.

16 “(3) EXEMPTIONS.—Except as provided in
17 paragraph (5), if the Secretary grants an exemption
18 under section 505(i) for a drug that is a medically
19 important antimicrobial, the Secretary shall rescind
20 each approval of a nontherapeutic use in a food-pro-
21 ducing animal of the medically important anti-
22 microbial as of the date that is 2 years after the
23 date on which the Secretary grants the exemption.

24 “(4) APPROVALS.—Except as provided in para-
25 graph (5), if an application for a drug that is a

1 medically important antimicrobial is submitted to
2 the Secretary under section 505(b), the Secretary
3 shall rescind each approval of a nontherapeutic use
4 in a food-producing animal of the medically impor-
5 tant antimicrobial as of the date that is 2 years
6 after the date on which the application is submitted
7 to the Secretary.

8 “(5) EXCEPTIONS.—Paragraph (3) or (4), as
9 the case may be, shall not apply if—

10 “(A) before the date on which approval
11 would be rescinded under that paragraph, the
12 Secretary makes a final written determination
13 that the holder of the application for the ap-
14 proved nontherapeutic use has demonstrated
15 that there is a reasonable certainty of no harm
16 to human health due to the development of
17 antimicrobial resistance that is attributable in
18 whole or in part to the nontherapeutic use in
19 the food-producing animal of the medically im-
20 portant antimicrobial; or

21 “(B) before the date specified in subpara-
22 graph (A), the Secretary makes a final written
23 determination, with respect to a risk analysis of
24 the medically important antimicrobial conducted
25 by the Secretary and any other relevant infor-

1 mation, that there is a reasonable certainty of
2 no harm to human health due to the develop-
3 ment of antimicrobial resistance that is attrib-
4 utable in whole or in part to the nontherapeutic
5 use of the medically important antimicrobial.

6 “(6) DEFINITION.—In this subsection:

7 “(A) The term ‘medically important anti-
8 microbial’ means a drug that—

9 “(i) is intended for use in food-pro-
10 ducing animals; and

11 “(ii) is composed wholly or partly of—

12 “(I) any kind of penicillin, tetra-
13 cycline, macrolide, lincosamide, strep-
14 togramin, aminoglycoside, sulfon-
15 amide, or cephalosporin; or

16 “(II) a drug from an anti-
17 microbial class that is listed as ‘highly
18 important’, ‘critically important’, or
19 ‘important’ by the World Health Or-
20 ganization in the latest edition of its
21 publication entitled ‘Critically Impor-
22 tant Antimicrobials for Human Medi-
23 cine’ (or a successor publication).

24 “(B) The term ‘therapeutic use’, with re-
25 spect to a medically important antimicrobial,

1 means the use of antimicrobials for the specific
2 purpose of treating an animal with a docu-
3 mented disease or infection. Such term does not
4 include the continued use of such an anti-
5 microbial in the animal after the disease or in-
6 fection is resolved.

7 “(C) The term ‘nontherapeutic use’—

8 “(i) means administration of anti-
9 biotics to an animal through feed and
10 water (or, in poultry hatcheries, through
11 any means) for purposes (such as growth
12 promotion, feed efficiency, weight gain, or
13 disease prevention) other than therapeutic
14 use or nonroutine disease control; and

15 “(ii) includes any repeated or regular
16 pattern of use of medically important
17 antimicrobials for purposes other than
18 therapeutic use or nonroutine disease con-
19 trol.

20 “(D) The term ‘noncustomary situation’
21 does not include normal or standard practice
22 and conditions on the premises that facilitate
23 the transmission of disease.

24 “(E) The term ‘nonroutine disease control’
25 means the use of antibiotics on an animal that

1 is not sick but where it can be shown that a
2 particular disease or infection is present, or is
3 likely to occur because of a specific, noneus-
4 tomary situation, on the premises at the barn,
5 house, pen, or other level at which the animal
6 is kept.”.

7 **SEC. 5. LIMITATIONS ON USE OF MEDICALLY IMPORTANT**
8 **ANTIMICROBIALS FOR NONROUTINE DISEASE**
9 **CONTROL.**

10 (a) **PROHIBITED ACTS.**—Section 301 of the Federal
11 Food, Drug, and Cosmetic Act (21 U.S.C. 331) is amend-
12 ed by adding at the end the following:

13 “(ccc) The administration of a medically important
14 antimicrobial to a food-producing animal for nonroutine
15 disease control in violation of the requirements of section
16 512A.”.

17 (b) **REQUIREMENTS.**—Chapter V of the Federal
18 Food, Drug, and Cosmetic Act is amended by inserting
19 after section 512 of such Act (21 U.S.C. 360b) the fol-
20 lowing:

21 **“SEC. 512A. LIMITATIONS ON USE OF MEDICALLY IMPOR-**
22 **TANT ANTIMICROBIALS FOR NONROUTINE**
23 **DISEASE CONTROL.**

24 “(a) **PROHIBITION.**—It shall be unlawful to admin-
25 ister (including by means of animal feed) a medically im-

1 portant antimicrobial to a food-producing animal for non-
2 routine disease control unless—

3 “(1) there is a significant risk that a disease or
4 infection present on the premises will be transmitted
5 to the food-producing animal;

6 “(2) the administration of the medically impor-
7 tant antimicrobial to the food-producing animal is
8 necessary to prevent or reduce the risk of trans-
9 mission of the disease or infection described in para-
10 graph (1);

11 “(3) the medically important antimicrobial is
12 administered to the food-producing animal for non-
13 routine disease control for the shortest duration pos-
14 sible to prevent or reduce the risk of transmission of
15 the disease or infection described in paragraph (1)
16 to the animal; and

17 “(4) the medically important antimicrobial is
18 administered—

19 “(A) at a scale no greater than the barn,
20 house, or pen level; and

21 “(B) to the fewest animals possible to pre-
22 vent or reduce the risk of transmission of the
23 disease or infection described in paragraph (1).

24 “(b) DEFINITIONS.—In this section:

1 “(1) The term ‘food-producing animal’ means a
2 food-producing animal intended for sale in interstate
3 commerce.

4 “(2) The terms ‘medically important anti-
5 microbial’ and ‘nonroutine disease control’ have the
6 meanings given to such terms in section 512(q).”.

7 (c) APPLICABILITY.—The amendments made by this
8 section apply beginning on the date that is 6 months after
9 the date of the enactment of this Act.
