

MOTION

State Senator Henry Stern recently introduced a legislative proposal that seeks to accelerate clean energy storage projects throughout Southern California. Senator Stern's proposal would establish a framework for expediting 120 MW of clean energy storage projects in both investor-owned and municipal-owned utilities.

This plan follows efforts by Southern California Edison and San Diego Gas & Electric to implement 100 MW of clean energy storage projects in their territories. These efforts were in response to the Aliso Canyon gas leak and the impact the leak had on local communities and the region.

The health and welfare of the Porter Ranch community was significantly affected by the natural gas leak. In addition, it threatened the reliability of local power systems given their dependence, in part, on natural gas.

Battery installations are able store power generated by the grid during the day and can be used to offset higher demand at night. This is especially desirable in places like California with high generation from renewables like solar. These efforts were in response to the Aliso Canyon gas leak and the impact the leak had on local communities and the region.

The implementation of clean energy storage projects in the region would serve to mitigate the dangers associated with natural gas use. These projects are cleaner, safer and more cost-effective for ratepayers. These projects also provide for greater power system reliability.

In order to ensure the City maximizes opportunities associated with the implementation of clean energy storage projects in the region, it is critical that the Department of Water and Power report to the Council. This way, the health and welfare of the City's residents and the environment can be ensured.

I THEREFORE MOVE that the Department of Water and Power immediately report to the Council on its efforts to implement clean energy storage projects in the City.

I FURTHER MOVE that the Department of Water and Power report on the feasibility of partnering with local investor-owned and municipal-owned utilities to implement clean energy storage projects in the region.
