Council File No: 17-0447

Comments for Public Posting: The Neighborhood Council Sustainability Alliance representatives voted without opposition to support the draft oil-drilling ordinance. The NCSA applauds the city, and we urge the city to enact it promptly. We also urge the city to:

- Phase out oil wells on a schedule similar to Culver City's five year phase-out. That city's amortization study found that most older wells had already paid off their costs. Los Angeles is performing its own amortization study as required by council motion 17-0447, but it would be surprising and disappointing if LA's phase-out was much slower than Culver City's.
- Promptly plug and abandon each phased out well at the operator's expense.
- Engage public health experts to report on community impact of highly toxic substances such as hydrofluoric acid used in oil wells, and draft regulations to prohibit any that pose a significant risk to the surrounding neighborhood.
- Encourage redevelopment of well sites in a way that benefits the community, with neighborhood input.

NEIGHBORHOOD COUNCIL
SUSTAINABILITY
ALLIANCE®

September 13, 2022

Dear City Planning Commissioners and other City leaders:

The Neighborhood Council Sustainability Alliance representatives voted without opposition to support the draft oil-drilling ordinance.

The NCSA applauds the city, and we urge the city to enact it promptly. We also urge the city to:

- Phase out oil wells on a schedule similar to Culver City's five year phase-out. That city's amortization study found that most older wells had already paid off their costs. Los Angeles is performing its own amortization study as required by council motion 17-0447, but it would be surprising and disappointing if LA's phase-out was much slower than Culver City's.
- Promptly plug and abandon each phased out well at the operator's expense.
- Engage public health experts to report on community impact of [highly toxic substances such as hydrofluoric acid](#) used in oil wells, and draft regulations to prohibit any that pose a significant risk to the surrounding neighborhood.
- Encourage redevelopment of well sites in a way that benefits the community, with neighborhood input.

Thank you,

Lisa Hart
