Agenda Date:

Item Number:

Summary: On behalf of over 40,000 stakeholders, the Los Feliz Neighborhood Council (LFNC) supports this motion and urges that no new gas, diesel, and fossil fuel stations (and no new pumps at existing stations) be permitted in the City. Adding new gas stations in Los Angeles not only would contribute to climate change worldwide and run against the City's climate goals, but would also harm those who live nearby. Studies have shown that gas stations worsen local air quality and raise rates of cancer, anemia, birth complications, and other ill health effects. It would also exacerbate the housing crisis and disproportionately affect low-income communities and communities of color. Gas stations also pollute the ground under them for years to come, making them harder and more expensive to rebuild into other uses. Likewise, they hurt the walkability and safety of neighborhoods, with their heavy traffic and many entrances potentially increasing risks to drivers, pedestrians, and bikers, and take up valuable urban land that could be used for much-needed housing or other businesses. California has over 7,500 gas stations and Los Angeles over 550, so the current number more than serves the needs of Angelenos. Moreover, the ordinance would allow current stations to adapt by adding electric-vehicle chargers and would continue to permit non-fuel services like convenience stores and carwashes. The LFNC urges the City Council to adopt this motion and a subsequent ordinance to enact its goals without delay.
